Subject:

Supporting research activities headed by the Naam laboratory in Rome as part of the RESTART projects.

Detailed description of the planned research activity:

Design, analysis and development of zero-touch solutions for 5G/6G networks using AI/ML for full automation of service management.

This activity will explore federated and distributed cloud architectures enabling zero-touch control for the management and orchestration of network devices (e.g., 5G and 6G VNFs) and user applications (e.g., microservices) in a highly distributed, dynamic and heterogeneous cloud/edge environment.

The architecture will focus on different automation domains and include a widespread and efficient monitoring architecture to power intelligent control algorithms. Cloud technologies under consideration will be based on multi-domain distributed Kubernetes clusters, which expose Prometheus metrics and whose data flows can be managed through appropriate service mesh management.

The activity is part of WP3 of the RESTART project "S3 Intelligent and autonomous systems." In addition, since it is intended to provide a supporting cloud infrastructure, the activity is also partially related to possible WP6 demonstrators.

The willingness to operate on other lines of project activity may be required if necessary.
